TESLA SAYS IT'S AUTO-PILOT IS TUNED TO HIT DARK SKINNED NEGRO PEOPLE IN CROSS-WALKS

Tesla Sentry Mode catches deliberate attack against Model 3, vandal arrested

By [Simon Alvarez](#) 

A Tesla Model 3 owner is thanking the video recording capabilities of Sentry Mode after it captured a shocking act of vandalism against his electric car. As could be seen in footage from the security feature, a woman stealthily yet aggressively keyed the Model 3 as she was ushering her children inside a Dodge Journey SUV, resulting in deep scratches to the vehicle's body panels.

A short clip of the incident was shared on YouTube by Rafael ["Teslatino"](#) Santoni, who noted in a conversation with *Teslarati* that while the incident definitely appeared premeditated, the Model 3 owner could not determine the lady's motivation for the attack. The damage from the incident was quoted at \$900 in repair costs by a third-party body shop.

Fortunately for the Model 3 owner, the [footage from Sentry Mode](#) (PHOTO: TESLARATI ON YOUTUBE) was able to

capture the entire incident, and it featured a clear shot of the woman's face. With her identity determined, the attack was promptly reported to the police, who later arrested the woman on vandalism charges. It remains to be seen if she will be required to pay for the damages she caused to the Model 3.

Perhaps more remarkable was that the Tesla owner seemed to have had an inkling that his vehicle was about to get vandalized. A day before the attack, the Model 3 owner found a small yet worrisome scratch on his car, which resulted in him rushing to a store to purchase a 32 GB memory stick. When he parked his vehicle on a Friday, he made sure that Sentry Mode was active. As it turned out, the Tesla owner's intuition was correct.

Tesla's Sentry Mode uses the electric cars' suite of cameras to **record footage** around the vehicle. Once activated, Sentry Mode enters its Standby state, where it monitors the electric car's surroundings. Following this is the Alert state, where the vehicle displays a warning on its screen that states footage is being recorded. In the event of a break-in, Sentry Mode enters the Alarm state, where it blares music at maximum volume while engaging the vehicle's lights in an attempt to attract attention.

While remarkable for their technology and performance, Tesla's electric vehicles remain polarizing to some groups of people. Attacks on Teslas have been recorded in the past, including a road rage incident against a Model 3 that resulted in an instant karma crash, as well as an unfortunate incident involving **vandals and a Supercharger**. Some electric car owners have also found themselves becoming victim to acts colloquially known as ICE-ing, which refers to gas-powered cars (intentionally or unintentionally) blocking access to charging stations.

Watch a vandal attack a Tesla Model 3 in the video below.

I do Lyft just so people get to experience a Tesla and see how great they are. I always get a few people who are ICEholes but most are very excited

and enjoy the experience. I also feel like I'm representing the Tesla community and how down to earth most of us are, not a bunch of rich pricks like some think, (maybe this woman). Just good American folks who want to, "think about the future and feel good about it" and spread that feeling to everyone.

You're a little nutty.

You do realize you are just like those "ICEholes" you mention just the polar opposite representation.
